

TCRN Special Seminar

11:00am, Wednesday 16 July 2014

Prof Jack Li

College of Medical Science and Technology
Taipei Medical University
UNSW Medicine Visting Professor

“Health and Biomedical Big Data for Translational Research?”

Level 4, Lowy Cancer Research Centre,
UNSW Kensington Campus (C25)

“The exponential accumulation of genomic and clinical data is now at a juncture of critical transformation that will lead to an era where results of basic research can be aggregated and translated into clinical practice at an accelerated pace” - Professor Jack Li.

This seminar will examine the availability of tools and data sets that can facilitate this transformation and will present examples and evidence of how this transformation will change the way we look at biomedical research forever.

Professor Li has been a strong proponent and innovator in the creation of interoperable electronic health records, and his development of a national health information exchange for Taiwan led to his receiving a National Health Contribution Award, Taiwan’s highest honour for contributions to the nation’s health.
